

## Git Clone Commands

### Basic Clone

To clone a repository:

```
git clone <repository-url>
```

Example:

```
git clone https://github.com/user/repo.git
```

### Clone to a Specific Directory

To clone a repository into a specific directory:

```
git clone <repository-url> <directory>
```

Example:

```
git clone https://github.com/user/repo.git my-directory
```

### Clone with Specific Branch

To clone a specific branch of a repository:

```
git clone --branch <branch-name> <repository-url>
```

Example:

```
git clone --branch develop https://github.com/user/repo.git
```

## **Git Clone Commands**

### **Clone with Depth**

To perform a shallow clone (limiting the history):

```
git clone --depth <depth> <repository-url>
```

Example:

```
git clone --depth 1 https://github.com/user/repo.git
```

### **Clone with Submodules**

To clone a repository and initialize all its submodules:

```
git clone --recurse-submodules <repository-url>
```

Example:

```
git clone --recurse-submodules https://github.com/user/repo.git
```
